

REMARKS

This amendment is supplemental to the amendment filed on October 4, 2004. In the amendment filed on October 4, 2004, applicants included data that showed that the claimed combination is unexpectedly effective for the treatment of depression and its related disorders. Applicants now present this data in the form of a Declaration Under Rule 132 by Ladislaus Maria BROERSEN.

Applicants believe that the data shows that the claimed combination of fatty acids, phospholipids and a methionine metabolism factor is better than a diet of fatty acids, and also better than a diet of vitamins and fatty acids supplemented with  $\omega$ -3 fatty acids DHA and EPA.

As a result, applicants believe that the claimed method for treating unipolar depression comprising the administration of fatty acids, phospholipids and a methionine metabolism factor, let alone in the claimed ratios or in co-administration with citrate and/or vitamin D3, is neither disclosed nor suggested in any of the combinations of literature cited by the Examiner.

In view of the foregoing remarks, the present amendment and the amendment of October 4, 2004, applicants believe that the present application is in condition for allowance at the time of the next Official Action, with claims 42-60, as presented.

Allowance and passage to issue on that basis are respectfully requested.

Respectfully submitted,

YOUNG & THOMPSON
